

LRE - JRE

PLAGES D'UTILISATION

Débits jusqu'à :	170 m ³ /h
Hauteurs mano. jusqu'à :	29 m
Pression de service maxi :	10 bar**
Plage de température :	-20° à +120°C
DN orifices :	32 à 80
MEI* de référence :	≥ 0,10

*Minimum Efficiency Index
**16 bar en option

AVANTAGES

- **ECONOMIE D'ÉNERGIE**
- Rendement élevé grâce au moteur IE2.
- Optimisation du point de fonctionnement des pompes.
- Economies d'énergie jusqu'à 50% par rapport à des pompes traditionnelles.

• MAITRISE DU BRUIT

- Suppression du siflement et des bruits hydrauliques au niveau des robinets thermostatiques.
- Adaptation automatique des performances aux besoins de l'installation.

• SIMPLICITÉ

- Un seul bouton pour le choix des fonctions et le réglage des consignes, directement sur la pompe.
- Paramètres toujours visibles sur écran LCD
- Un seul modèle de convertisseur pour toutes les applications ($\Delta p-c$, $\Delta p-v$, PID et n-constant).
- Fonctionnement des pompes en mode secours ou parallèle.

• COMMUNICATION

- Affichage en local et à distance des informations de marches et d'erreurs.
- Consultation « instantané » de l'état de l'installation : consommation électrique, pression ou température.
- Enregistrement de la consommation électrique, temps de fonctionnement, horaire de mise en route des pompes...

POMPES EN LIGNE SIMPLES ET DOUBLES

Pilotage électronique

Chauffage - Climatisation

50 Hz

APPLICATIONS

Pour la circulation accélérée d'eau chaude ou glacée, non corrosive et sans résidus abrasifs, avec optimisation du point de fonctionnement.

- Chauffage petit collectif et collectif.

- Climatisation.
- Nombreuses applications industrielles ou agricoles.
- Chauffage de serres etc.

VEV

C
Certificat
Économie
Énergie
Produit éligible

• JRE : pompe double à pilotage électronique

• LRE : pompe simple à pilotage électronique

LRE - JRE

CONCEPTION

Partie hydraulique

- Pompes simple ou double à bride (PN10/16), monobloc, centrifuge, monocellulaire, pourvue d'un système de régulation de vitesse intégré.
- LRE: modèle simple ; JRE: modèle double.**
- Orifices aspiration/refoulement en ligne.

Moteur

- Haut rendement IE2.
- Moteur à rotor sec.
- Etanchéité au passage de l'arbre assurée par garniture mécanique auto-lubrifiée.
- Protection moteur intégrée dans la boîte à bornes (PTC).

Vitesse : 750 à 2900 tr/mn.

Bobinage triphasé : 400 V ± 10%

Fréquence : 50 Hz

Classe d'isolation : F (155°C)

Index de protection : IP55

Conformité CEM : EN 61800-3

Conformité CEI : 60034

CONSTRUCTION DE BASE

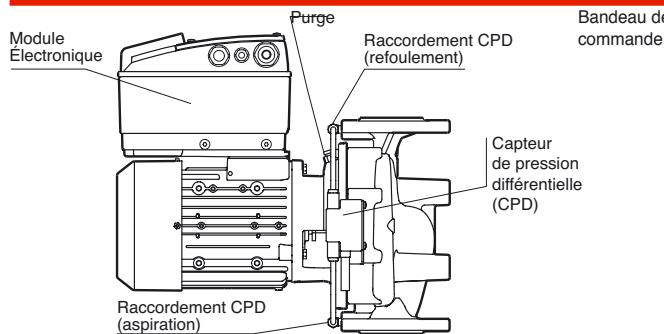

Pièces principales	Matériau
Corps de pompe	EN GJL 250
Lanterne palier	EN GJL 250
Arbre	Aacier X20-Cr13
Garniture mécanique	Carbure Si/carbone/EP
Roue	Polypropylène + Fibre de verre

IDENTIFICATION

LRE ou JRE 2 03-16/1.1 3G

Code pompe _____	simple/simple double électronique
Moteur 2 pôles _____	
Ø nominal des orifices en cm _____	
Ø nominal de la roue en cm _____	
Puissance moteur en kW _____	
3ème génération _____

LRE - JRE

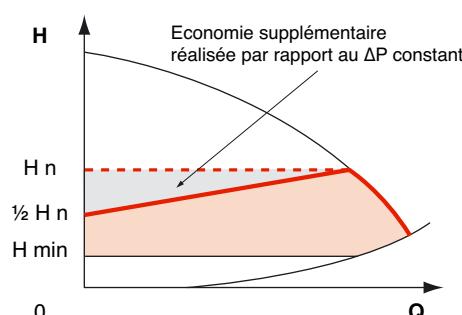

COURBES DE PRINCIPE DE FONCTIONNEMENT

• Fonctionnement en ΔP constant

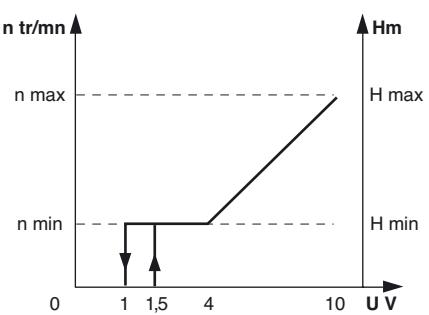

L'électronique maintient la pression différentielle, suivant le débit demandé, à la valeur de consigne H_n , jusqu'à la courbe caractéristique maximale.

• Fonctionnement en ΔP variable

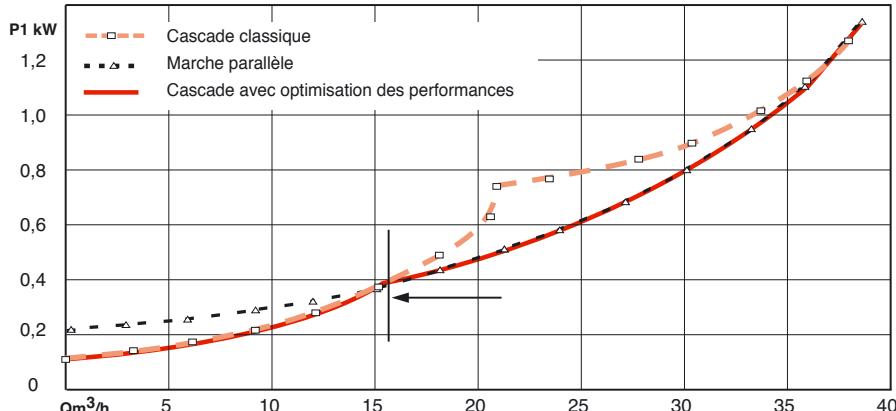

L'électronique modifie linéairement entre H_n et $1/2H_n$ la valeur de pression différentielle de consigne. La valeur de pression différentielle de consigne augmente ou diminue avec le débit demandé.

• Fonctionnement DDC (exemple 0-10V)

- Réglage externe de la vitesse ou du point de consigne par signal : 0-10V ou 2-10V ou 0-20mA ou 4-20mA
- Marche/arrêt externe
- Reports de défaut et état de marche

• Fonctionnement en cascade synchronisée

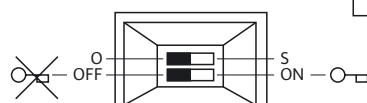

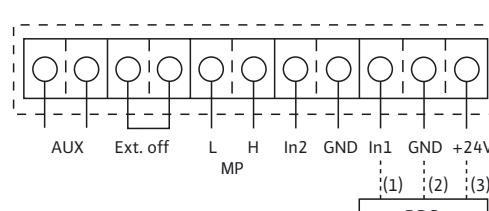

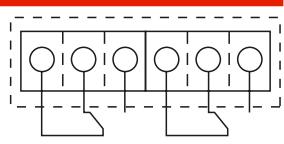

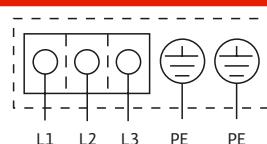

Fonctionnement en cascade d'une pompe JRE. A débit équivalent, la pompe utilise automatiquement la courbe de moindre puissance.

RACCORDEMENTS

Charge pour les contacts secs des reports de marche et de défaut : min. 12V DC/10mA, max. 250V AC/1A

- **L1,L2,L3,PE**: Raccordement au réseau 3~400V/50Hz
- **SSM**: Contact sec inverseur pour signal de défaut global
- **SBM**: Contact sec inverseur pour signal de marche
- **AUX**: Permutation de la pompe externe (uniquement pour les pompes doubles). Via un contact extérieur, une permutation de la pompe sera effectuée (contact sec sans potentiel, permutation à chaque impulsion).
- **Ext Off**: Contact sec pour commande «marche/arrêt» à distance
- **MP**: Interface de connexion d'une pompe esclave pour gestion de pompe double
- **1**: IN1 connexion du capteur de pression différentielle 0-10V / 2-10V / 0-20mA / 4-20mA (entrée) correspond à 40 à 100% de la vitesse de rotation nominale
- **2**: GND masse
- **3**: +24V (sortie)

LRE - JRE

TABLE DE FONCTIONS LRE / JRE

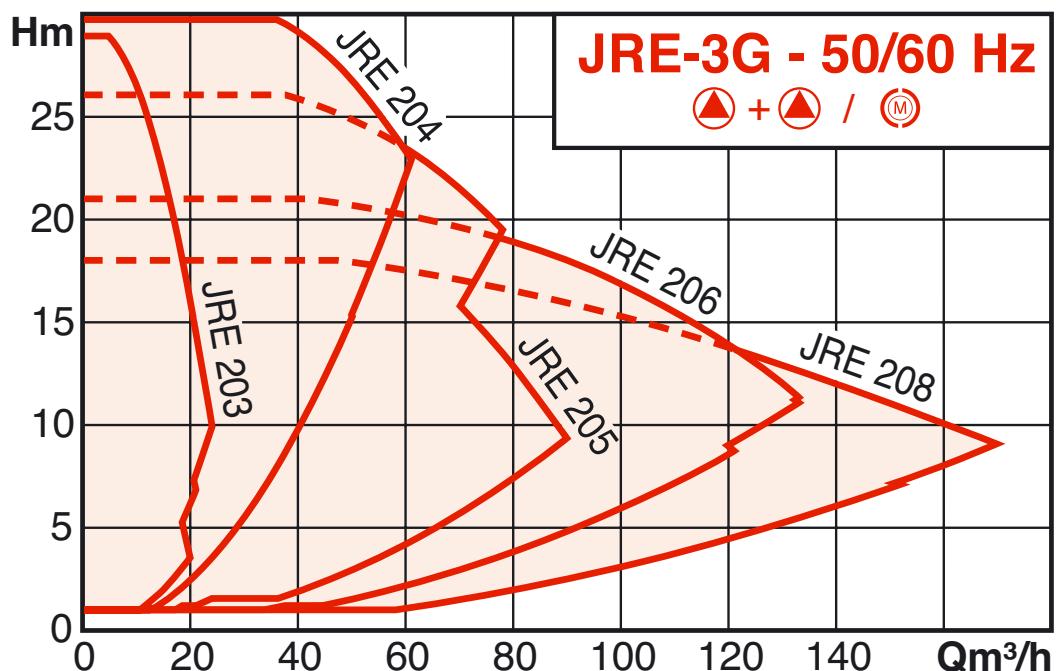

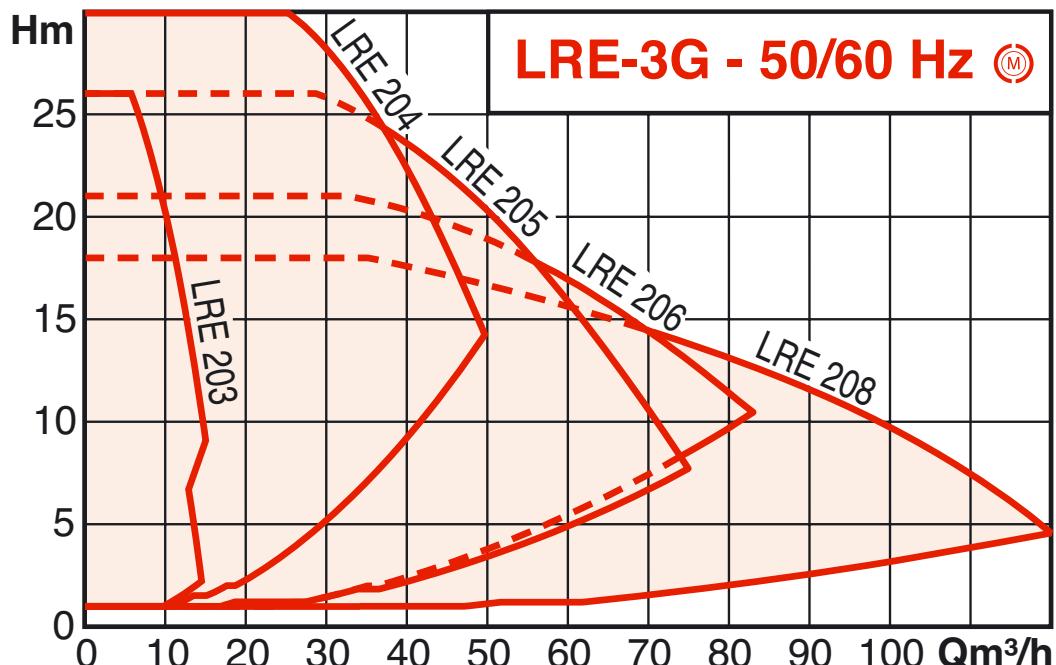

Fonction	Pompes simples et doubles LRE / JRE
Modes de fonctionnement	
Δp-c pour pression différentielle constante	•
Δp-v pour pression différentielle variable	•
Mode réglage ($n = \text{constant}$)	•
Commande manuelle	
Bouton unique et écran	•
Fonctions manuelles	
Réglage de la consigne de pression différentielle	•
Réglage de la vitesse de rotation (mode réglage)	•
Réglage du mode de fonctionnement	•
Réglage pompe marche/arrêt	•
Configuration de tous les paramètres de fonctionnement	•
Acquittement des défauts	•
Fonctions de commande externes	
Entrée de commande « priorité Off »	•
Entrée de commande « Permutation des pompes externe » (uniquement active en mode double pompe)	•
Entrée de commande « Analog In 0 ...20 mA » (modification à distance de la vitesse)	•
Entrée de commande « Analog In 0 ...10 V » (modification à distance de la vitesse)	•
Entrée analogique 0-10 V pour le signal valeur réelle du capteur de pression	•
Entrée analogique 2-10 V, 0-20 mA pour signal valeur réelle du capteur de pression	•
Signalisation et affichage	
Message de défauts centralisé (contact de repos sec)	•
Message de marche centralisé	•
Echange de données	
Interface infrarouge pour l'échange de données sans fil avec la clef USB Salmson Pump control branchée sur PC portable	•
Emplacement pour modules IF Salmson (Modbus, BACnet, CAN, PLR, LON) pour la connexion à la gestion technique centralisée	•
Fonctions de sécurité	
Protection moteur intégrale avec déclencheur électronique intégré	•
Verrouillage d'accès	•
Pilotage pompes doubles (pompe double ou 2 pompes simple)	
Mode de fonctionnement principal/de réserve (permutation automatique en cas de défaut)	•
Mode de fonctionnement principal/de réserve (permutation des pompes au bout de 24 heures)	•
Marche parallèle	•
Marche parallèle (avec optimisation du rendement en fonction des besoins)	•

• = fourni

LRE - JRE

PARTICULARITÉS (LRE-JRE)

a) Electriques

- Tous types TRIPHASE 400V-50Hz.
- Protection moteur intégrale par sonde sur chaque bobinage.
- Arrêt défaut intégré en cas de surtension ou de surchauffe.

L'installation doit permettre une protection de la pompe contre les intempéries et le gel (pas d'exposition directe à la pluie ou au soleil).

c) Conditionnement

Pompes livrées avec variateur de fréquence et capteur de pression différentielle, sans contre-bride.

b) Montage

- Direct sur tuyauterie horizontale ou verticale.
- Raccordement à l'installation par contre-brides rondes à souder PN 10/16 (non fournies).

d) Maintenance

Echange standard complet de la pompe ou réparation.

ACCESOIRES

- Contre-brides rondes à souder PN 10/16.
- Vannes d'isolement.
- Module IF (ModBUS, LON, BACnet S/TP, CAN, interface numérique PLR)¹

¹⁾Voir table de fonctions

LRE - JRE

NOTES
